
from the AQUATIC THOUGHT FOUNDATION!

GREETINGS LAND MAMMALS!

We are a privately funded research organization dedicated to the exploration of HUMAN-DOLPHIN INTERACTION. Since 1989, Aquatic Thought has studied the neurological impact of close contact with dolphins on human subjects and the related therapeutic phenomena. Our research in neurological imaging has led to the development of MINDSET, a low-cost neuro-mapping electroencephalograph program which makes advanced EEG research affordable. Our work has also led to the development CYBERFIN, a virtual reality simulator which will bring virtual dolphin contact to a massive audience.

The EcoPlex Center, to be located in SAN JOSE, CA will facilitate dolphin assisted therapy programs, dolphin interaction research, adjunct therapeutic modalities, and research and development in related neurotechnology and virtual reality enterprises.

Aquatic Thought, in conjunction with Dolphin Discovery, hosts the annual International Symposium on Dolphin-Assisted Therapy, a conference focused on the exchange of research, methodologies, and ideas, and the application of neurotechnology and virtual reality in dolphin-assisted therapy.

To take part in the International Symposium on Dolphin-Assisted Therapy, or to simply find out for information about our group and what we do, please contact us: Call **(415)325-4014** *or visit our website at*
